

Like Rumpelstiltskin, we are working hard to turn straw into gold! Except instead of straw, we are collecting lots of green (fresh when harvested) and brown organic material (dry when harvested) to turn into the gold of an organic alternative to fertilizer, through thermal composting! This compost can be used in place of chemical fertilizers as a more affordable means for small-scale farmers to have healthy crops with increased food yield.

In September, we started working on collecting these materials in earnest, as we have just concluded arrangements with Equipping Farmers International to schedule our very first Pfumvudza trainings in November for national missionaries and pastors from Omega Global and Overflowing Grace Church!

With the rains about to end for the year, we don't have much time left to harvest green materials, so on his most recent trip to the farm Raph took Tom along so that Tom could start harvesting green materials from the project site while Raph took care of weed management on the farm. Tom was also able to train another young man to use the weed whacker to help with the work. **(Scan the QR code to learn more about composting and to see Tom at work!)** →

Please pray for these preparations and for the hearts of those we will be training will be prepared as well.

Faith's Heart

"I will give you hidden treasures, riches stored in secret places...." ~Isaiah 45:3
